New Display in the Rare Book Room at the Downtown Central Library

There is art to be found in science books and science to be found in artist's books. Although current society has come to think of science and math exclusively as “left-brained” functions while art and creativity are considered “right-brained” activity, some book artists are bridging this hemispheric divide with artist's books and book arts inspired by science texts. These artist's books reflect upon or interpret significant works and concepts of astronomy, medicine, geology, physics and more. Today's mutually exclusive idea of “left-brained” and “right-brained” activity discounts longer understood ideas that science is a creative pursuit—that there really is art to be found in science—and that creative artworks often have some scientific basis and/or inspiration.
